Pixel Ribbon Go Indoor

Project: _____

Type: _____

DMX 512

IP20

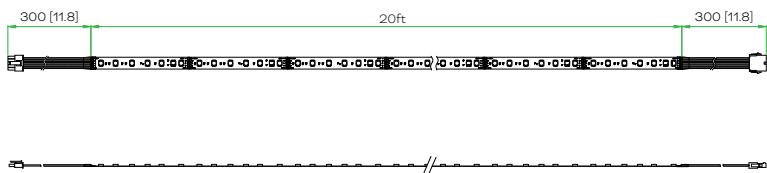

The Traxon Pixel Ribbon Go Indoor is a flexible, IP20-rated neon strip alternative, now designed specifically for indoor applications. This DMX512-controllable light strip is ideal for high-quality colored light displays, featuring an open beam version that provides broad, uniform light distribution across interior spaces. With a 100mm / 4" pixel pitch, the Pixel Ribbon Go offers an assortment of colors and CCT options, customizable lengths, and adaptable cable feed positions for precise installation, making it a versatile solution for ambient and decorative indoor lighting.

Features

- DMX512 Control.
- Pixel Pitch: 100mm [4"] pixel pitch, allowing for precise pixel control.

LED CHARACTERISTICS Because LEDs are semiconductor devices, their performances are subject to inherent variability commonly found in semiconductor industry. To improve consistency in performance across the same product, LED manufacturers "sort" LEDs into bins according to different preset parameters, such as forward driving voltage, illumination, etc. Whereas binning is a sorting function, it is not a correction process. Inherent variability in the manufacturing process results always in different binning distributions according to different production lots. Traxon uses automatically binned LEDs on its products, thereby minimizing output variations within the model range.

As with all electronic devices, LED output degrades over time – a term called lumen depreciation. This also explains why it is nearly impossible to expect photometric performances of two LED products with different service life spans to be the same. The rate of LED degrade is a complex function of many factors such as operating efficiency, duration of continuous operation, and more significantly, environmental conditions (ambient temperature for example). If allowed working under optimal operating temperature range and with good ventilation, LED devices enjoy long service lives over conventional light sources. When using/installing LED devices, care should be taken to ensure that the devices will operate within the operating conditions specified in respective product literature.

This product contains a light source of energy efficiency class G to Regulation (EU) No 2019/2015.
Lumen measurement complies with LM-79-08 standard.
Lumen maintenance is calculated based on LM-80 compliant measurement.

Typical Power Injection Wiring with Y-cable

NOTE: Mounting accessories not shown.

NOTE: Power injection is required when Pixel Ribbon Go connection length reaches the maximum length with single power feed.
This wiring diagram shows only typical connections. Actual wiring depends on Ribbon configuration and installation. Actual no. varies according to cable lengths and signal source.
Maximum length per 100W 24v PSU is 20ft. Please consult your local Traxon office for aid.
