AN OSRAM BUSINESS

Traxoncue is a subsidiary company. We are happy to provide whatever information and documentation is needed to assist the system design and design utilities loading of our products. Please know, however, that our expertise is limited to our products only. Traxoncue and its employees cannot be held responsible for decisions relating to layout, lighting design, electrical wiring, structural engineering, or construction methods. In our documents, we may sometimes make suggestions or recommendations relating to the aforementioned disciplines, but on that same note, we will make every effort to ensure that a system is installed and working properly. To that end, a system commissioning service may be relied on our suppliers. As part of the system commissioning service, we will provide a written report detailing the results of the commissioning service. We will not be held responsible for the results of the commissioning service. Deciding the system commissioning service addresses Traxoncue's responsibility of any and all responsibility for the functioning of the finished system beyond the standard product warranty. It is the responsibility of the installing contractor to install all future and control equipment in its intended location and to make all wire terminations. The installing contractor is also responsible for the proper installation of the system. Traxoncue is not responsible for the results of the commissioning service. Traxoncue does not provide any lighting or electrical services as part of its Traxoncue is not responsible for content (e.g. videos or lighting cues) unless it is specifically agreed upon and dated separately from standard system commissioning services in the project agreement. Traxoncue is happy to support your team in every way we can, and we look forward to a beautiful and successful installation.
