

#### Project: Type:

# Allegro Dot XS White

Allegro Dot XS is the newest and smallest member of the intelligent Allegro Dot family which enables longer chains of illuminated Dots. The Allegro Dot XS is ideal for outdoor media applications, where it can be integrated seamlessly into the facade, or it can be installed to float in the air with our highly transparent mounting options. Each system is driven by the PXL Distributor Pro 8 (PDP8) which integrates power and data into one unit, reducing the

space required for installation components. Each PDP8 can support up to eight Allegro Dot XS outputs with e:net IN and OUT.

Product Specifications				SCE IP66 IP67 DynaMood®
Models	WW 2700K Clear	CW 6500K Clear	WW 2700K Diffused	CW 6500K Diffused
Number of Pixel	Max. 80 per string Max. 640 per system			
Light Source	1 White LED per dot			
CRI	>80 for White LED			
Luminous Flux <sup>1</sup>	25 lm	27 lm	21 lm	23 lm
Brightness <sup>1</sup>	9.00 cd	9.72 cd	4.06 cd	4.44 cd
Beam Angle	115°		175°	
Cover Lens	Clear UV Stable PC		Diffused Dome UV Stable	PC
LED Pitch	Standard 90mm / 3.5"; 50mm / 2" to 500mm /19.7" with 80 Dots			
Housing	Polycarbonate			
Dimensions (W × L x H) <sup>2</sup>	19mm x 41mm x 10.6mm /	/ 0.7" x 1.6" x 0.4"		
Weight	796g / 28oz full string; 9.5g 3.5" cable	g / 0.33oz single dot with 90mm /	824g / 29oz full string; 9.8 90mm / 3.5" cable	3g / 0.34oz single dot with
Regulatory Listing & Safety Approval	CE, UKCA, cETLus, RoHS,	REACH		
Operating Temperature	-25°C to + 55°C (Other tha	n N. America) / -13°F to 122°F ( N. /	America)	
Storage Temperature	-40°C to + 70°C / -40°F to	+158°F		
Environment	IP66 & 67 Outdoor Rated			
Humidity	0 to 90% non-condensing			

Electrical Specifications		
Input Voltage Allegro Dot XS 30V DC; PXL Distributor Pro 8 120V-277V AC nominal		
Power Consumption (Typ.)	Allegro Dot XS White: 0.5W per Dot PXL Distributor Pro 8: 10W Full system: 400W	

#### System Specifications

Power AC line	
Control e:net <sup>3</sup> IN and OUT via PXL Distributor Pro 8	
Power Supply Integrated 450W; Isolated outputs for Class2 Compliance	
Addressing Options Auto-addressing	

#### 1. Measurement per dot.

1. Measurement per use.
2. Per Dot
3. An Ethernet-based e:cue protocol used for communication between e:cue Engines and Interfaces.

LED CHARACTERISTICS Because LEDs are semiconductor devices, their performances are subject to inherent variability commonly found in semiconductor industry. To improve consistency in performance across the same product, LED manufacturers "sort" LEDs into bins according to different presst parameters, such as forward driving voltage, illumination, etc. Whereas binning is a sorting function, it is not a correction process. Inherent variability in the manufacturing process results always in different binning distributions according to different presst parameters, such as forward driving voltage, illumination, etc. Whereas binning is a sorting function, it is not a correction process. Inherent variability in the manufacturing process results always in different binning distributions according to different presst parameters.

As with all electronic devices, LED output degrades over time – a term called lumen depreciation. This also explains why it is nearly impossible to expect photometric performances of two LED products with different service (le spans to be the same. The rate of LED degrade is a complicate function of many factors such as operating efficiency, duration of continuous operation, and more significantly, environmental conditions (ambient temperature for example), it allowed working under optimal operating temperature range and with good ventilation, LED devices enjoy long service lives over convertional light vortex. When such example, it allowed to be the same.

This product contains a light source of energy efficiency class G to Regulation (EU) No 2019/2015. Lumen measurement compiles with LM-79-08 standard. Lumen maintenance is calculated based on LM-80 compliant measurement.
